

ISRAEL'S FHIR COMMUNITY IS SCALING UP AND LOOKING FOR PROFESSIONAL EXPERTS AND CONSULTANTS!

Since the establishment of the Israeli FHIR community in 01/2021, which to date comprises over 500 members, we published the first drafts of IL core profiles, and launched unique FHIR use cases. These use cases are all based on collaborations between health organizations and startups (please visit our website for more info)

2022 is our scale up year!

The Ministry of Health (MOH) has recently published a large-scale incentive program for the 4 Israeli HMOs, which together insure the full Israeli population of 9.3 million, to implement FHIR and SMART on FHIR. The first step of this plan requires each HMO to build a FHIR team and submit a FHIR strategy and work plan for the approval of the MOH.

In support of a timely scale up and of helping our community members build their FHIR strategy and work plans the FHIR-IL community will subsidize short-term consultation packages by leading FHIR experts.

Furthermore, the community will commission FHIR experts to advise and lead new work-groups as part of the MOH incentive program.

We are looking for a wide range of expertise - from Data Modeling and Profile Building, through Architecture and Infrastructure, SMART on FHIR and CDS Hooks, Measures, CQL and data collection, large-scale FHIR projects management and C-level planning and additional FHIR related skillsets.

Are you a leading FHIR professional expert?
Interested to tap into the growing FHIR IL standard?
Wish to consult 10-20 hours a month during 2022?
Please send your CV to fhir-il@8400thn.org
And join our leading experts team!

** Choice of consultant packages will be made by community members according to their preferences. The FHIR IL Community will stay neutral and will only make your information accessible to community members regarding optional consultation offers. Long-term consultation agreements will be conducted directly with community members and not through the community.
